

Emergency response for your Web server

SiteCertain ensures that you have first aid on hand if your Web site fails. With continuous monitoring and automated failover to your back-up IP addresses, you can be certain that traffic will always reach your Web server.

Be Certain

Web-sites can fail for many reasons. The Afilias DNS network already guarantees 100% reliability for managing your DNS. Now with SiteCertain, you can add the peace of mind of knowing you will always have an emergency response plan in case of a Web server failure.

Our Web performance monitoring checks your Web servers continuously from over 40 locations worldwide. In the event of a server error, SiteCertain will dynamically update your DNS records so that your domain name always points to a functional server. SiteCertain allows you to have nine additional IP addresses preloaded to serve as automated back-up sources if errors occur.

SiteCertain also checks for user specified page content, so not only can you be certain that your pages are loading but that they are appearing exactly as they should, without errors.

Easily configure your SiteCertain settings through our simple Web interface, including specifying your IP fail-over addresses, monitoring intervals, verification of Web page content, and even email or SMS notifications/alerts in case of failure.

Afilias Managed DNS Services

Afilias' Managed DNS Service provides you with the opportunity to rely on a proven DNS network and 100% uptime guarantee to ensure that traffic to your site always gets through. Afilias' global DNS network intergrates diversity at every layer to ensure DNS reliability. Afilias' DNS is relied on by nearly 15 million domain names across the globe, including top-level domains like .info and .org.

Add SiteCertain to your Afilias Managed DNS account

Cost effective solution

Reduce your additional hardware, software and staff costs normally required for extensive DNS monitoring and fail-over services.

Monitoring & Automatic Protection

Continuous monitoring of Web servers, http or https Web pages and automated fail-over to up to 9 additional IP addresses.

Control & Alerts

User control over monitoring intervals and SMS or e-mail alert/notification of emergency situations.

- 24/7 monitoring of your IP address
- Customizable scripting to ensure your pages are correctly loading
- Provides automated notifications/alerts on errors via email and SMS
- Automated Failover reducing downtime
- Easily configured through our web portal
- DNS and Monitoring all from a single provider
